Project Name: Predicting the energy output of wind turbine based on weather condition

## Predicting The Energy Output Of Wind Turbine Based On Weather Condition

Renewable energy, such as wind and solar energy, plays an increasing role in the supply of energy worldwide. This trend will continue because global energy demand is increasing, and the use of nuclear power and traditional sources of energy such as coal and oil is unsafe and leads to a large amount of CO<sub>2</sub> emission. Wind energy is a key player in the field of renewable energy. In Europe, the capacity of wind energy production has doubled from 2000 to 2010.

However, levels of production of wind energy are hard to predict as they rely on potentially unstable weather conditions present at the wind farm. In particular, wind speed is crucial for energy production based on wind, and it may vary drastically over time. Energy suppliers are interested in accurate predictions, as they can avoid overproduction by coordinating the collaborative production of traditional power plants and weather-dependent energy sources. The energy can be predicted based on the power curve and the wind speed.

WIND ENERGY: THE FUTURE

## Predicting The Energy Output Of Wind Turbine Based On Weather Condition

GIVE YOUR CITY NAME TO KNOW THE WEATHER CONDITIONS

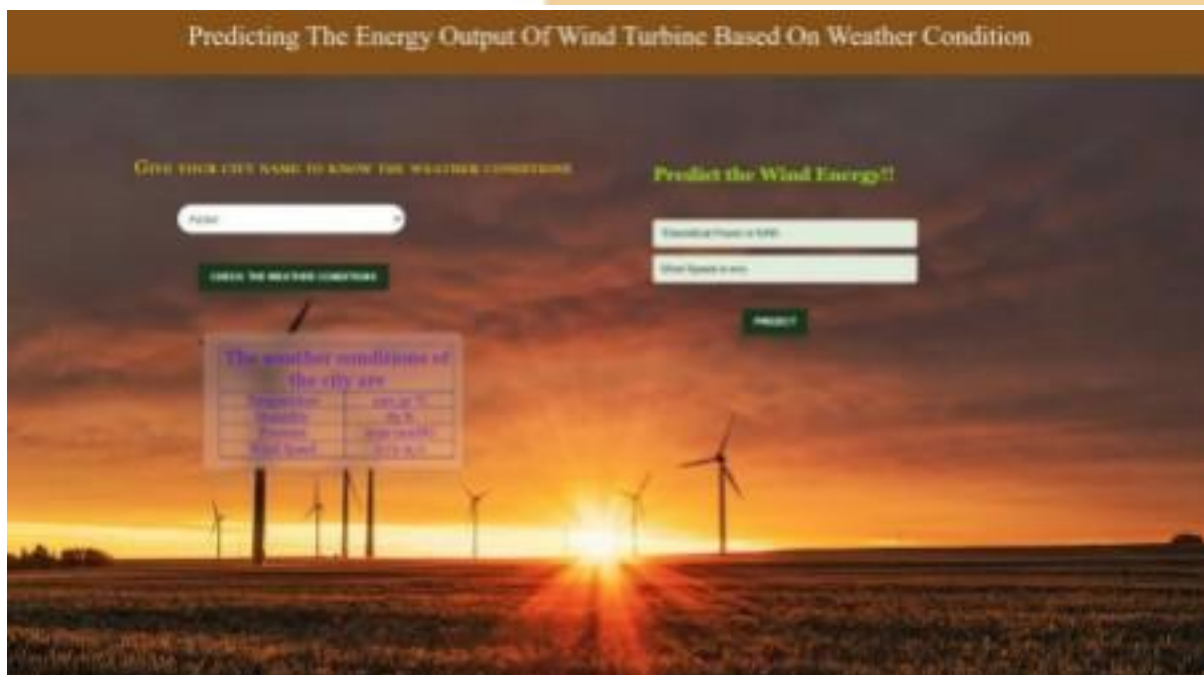

CHECK THE WEATHER CONDITIONS

Predict the Wind Energy!!

PREDICT

The weather conditions of the city are

Temperature	100.00 °C
Humidity	75.0%
Pressure	1013.25 hPa
Wind Speed	10.0 m/s

## Predicting The Energy Output Of Wind Turbine Based On Weather Condition

Give your city name to know the weather condition

Check the weather condition

Predict the Wind Energy!!

predict

The weather conditions of  
the city are

Temperature	°C
Humidity	%
Pressure	hPa
Wind speed	km/h

The energy produced is  $\text{mW} \times 1000$
